

Telemetry Ingestion Pipeline - Git Repository Export

Mock files for AI model evaluation. Includes ingestion scripts, manifests, schemas, and environment variables.

ingestion.py

```
import requests
import time
import json
from config_loader import load_config
from auth import get_api_key

def fetch_telemetry_data():
    # Load current configuration and keys
    config = load_config('pipeline_config.yaml')
    api_key = get_api_key()
    endpoint = config['primary_endpoint']

    headers = {"Authorization": f"Bearer {api_key}"}

    # CURRENT BUG: Naive request execution, prone to 429 Rate Limit drops
    # Missing exponential backoff or dynamic token bucket optimization
    response = requests.get(endpoint, headers=headers)

    if response.status_code == 200:
        return response.json()
    elif response.status_code == 429:
        # System is currently dropping packets here
        print("ERROR 429: Rate limit exceeded from primary data connector. Dropping packet.")
        return None
    else:
        raise Exception(f"Failed to fetch data: {response.status_code}")

if __name__ == "__main__":
    print("Starting telemetry ingestion pipeline...")
    while True:
        data = fetch_telemetry_data()
        if data:
            print("Packet successfully ingested.")
        # Aggressive static polling
        time.sleep(0.1)
```

pipeline_config.yaml

```
pipeline_name: "live-telemetry-ingestion"
version: "1.0.3"
description: "Main configuration manifest for market data stream"

primary_endpoint: "https://api.primary-data-connector.com/v1/telemetry"
secondary_endpoint: "https://api.backup-connector.net/v2/stream"

settings:
  poll_interval_ms: 100
  retry_strategy: "none" # Target for optimization
  max_retries: 0
  failover_enabled: false
  target_latency_ms: 200
  acceptable_packet_loss_pct: 0.0
```
